

Plan, Configure and Manage

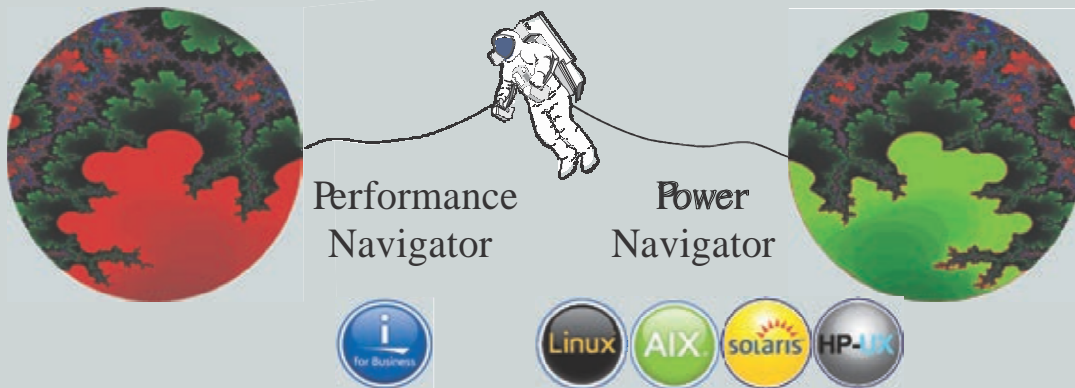

IBM® Power , Oracle®, and HP® Servers

With MPG's Navigator Family™

Single Interface

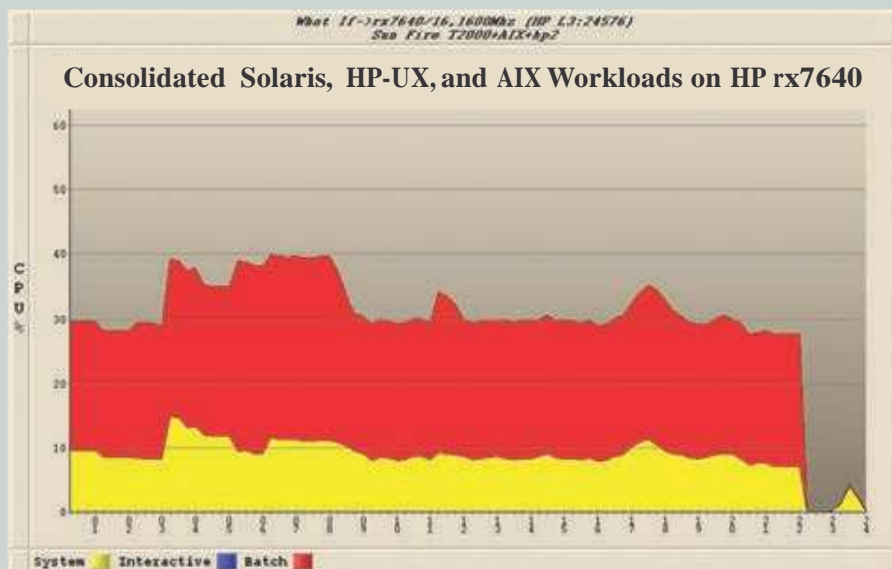

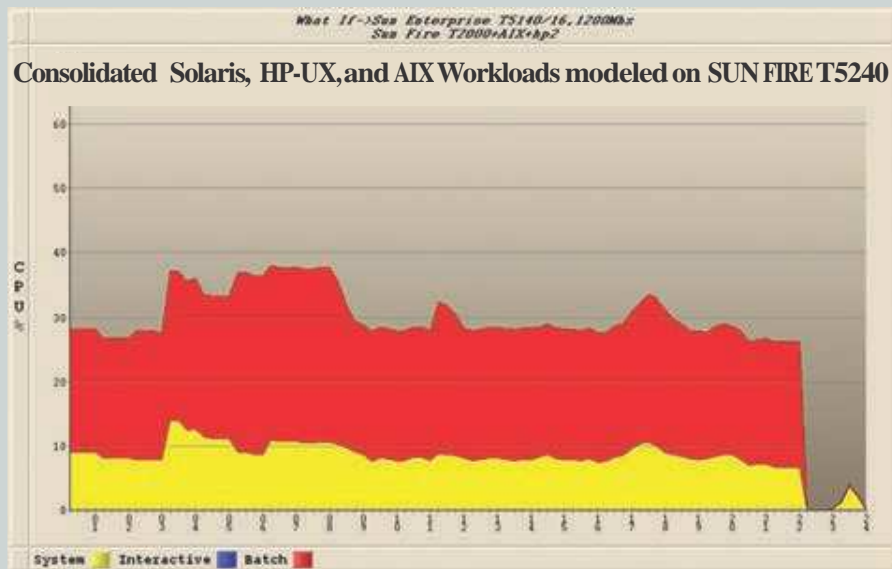

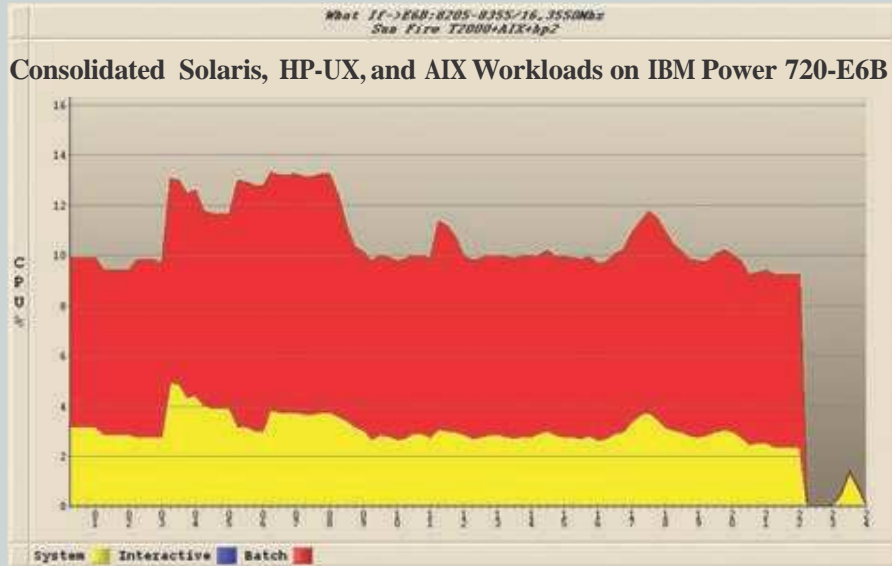

Multidirectional Modeling

Powered by IDC QPI®

Track the performance HISTORICALLY for all operating systems supported by IBM Power, Oracle and HP Servers. With the exclusive Navigator Family's Capacity Planning feature, data collected from ANY listed operating system can be modeled to ANY server, consolidated, and Logical Partitions configured. Use on existing systems to scientifically plan your server consolidation and then manage the new System with management graphs and reports. Take advantage of what over 125 IBM business partners already know, that MPG's Navigator Family is THE preferred method of planning and managing your next server upgrade or consolidation. And when you are finished Planning and Configuring, you can manage it on an on-going basis.

Gain access to performance workloads from these operating systems.
