

Powertech Risk Assessor for IBM i

A comprehensive diagnosis is often overlooked when it comes to the security configuration of IBM i. Most system administrators only have the time to manage passwords and monitor a few, selected system values. But when it comes to security, the task extends beyond passwords and system values. Powertech Risk Assessor for IBM i automates the process of gathering security information. Risk Assessor leverages Carol Woodbury's years of IBM i expertise to produce a comprehensive report that includes:

- Details about the security issues discovered
- Explanations of the business risks presented
- Recommendations for addressing the issues
- Considerations before making changes

100+ Risk Points Covered by Risk Assessor Include:
